

FOREFRONT IMAGE NO HEADING OVERLAY

Background

- Desktop: 1920 wide x 865 high
- Mobile: 400 wide x 800 high

Forefront Image

- This option was created for when the banner contains design elements
- The forefront image works similarly to the logo, it sits on a layer of its own above the headline
- The forefront image can be aligned left, centre or right
- The image in this example is 500px W x 325 px H with 95px of clear space on the top
- This was created for designed type, so would usually not include a CMS headline, but can include the search input.
