

PAGE HERO BANNER

Viewport on wider screens:
Approx. 1920px wide x 315px high

Viewport on smaller screens:
Approx. 1366px wide x 360px high

Viewport on mobile
(When you do not upload a separate mobile image)
Approx 390px wide x 400px high

Image banner

Desktop: 1920 wide x 400px high

Mobile: 400 wide x 400 high

Tips:

- It is not ideal to include text or graphic elements as part of the hero banner due to the way it resizes across devices.
- If it is necessary, ensure the graphics are in the vertical centre of the image for best rendering across devices
- On the dynamic template, the hero banner is created using the full width slider module (same as the homepage module). We select ‘no text overlay’ and set the pixel height to 300px or 400px (or whatever you like)
- There is also the option to add the banner to the page teplate itself (in the same way you would with older page templates). The only issue with this is you cannot select a separate image for mobile, the mobile banner will be cropped to the centre.
